

## IT PiAST AXAPTA Return Packages Register

IT PiAST AXAPTA Return Packages Register is designed for controlling and monitoring return packages balance with customer (with return packages such as pallets, boxes, baskets etc.) in desired period of time. The system allows to generate packages reminders, sales orders and charges for return packages. The application will make you avoid losses which are caused by lack of control over return packages

### Key benefits

- ✘ Control your return packages management – all return packages transactions are recorded in the return packages registry, and are connected with appropriate warehouse transactions
- ✘ Register your return packages with your customers – IT PiAST Axapta Return Packages Register will provide you the possibility of monitoring return packages balances in desired period of time, with desired customer, external warehouse or any other business relation

### How Return Packages Register works?

- ✘ The application works on the level of warehouse transactions which account the return packages with packing slips or warehouse transfer journals

Parameter ID	Sales order	Line No	Customer acc...	Return Package Id	Received	Issued
840717	17832	1,0000000000	14000-001	EUR_PKP		10

- ✘ It is not possible to omit return packages registering
- ✘ Also works perfectly with warehouse management modules
- ✘ Generates clearings, packages reminders and proposes sales orders at any desired moment
- ✘ The driver confirms both quality and quantity of brought return packages

### Safety

- ✘ All transactions are assigned to user who

created them – clear responsibility

- ✘ Advanced security access mechanism
- ✘ It is not possible to delete a transaction which is written and accounted in return packages registry although further correction is possible (correction note)

#### Flexibility

- ✘ Return packages sales order (linked with customer return packages balance) provides possibility of settling accounts with customer concerning any amount of registered return packages. The system provides that complaints may be taken into consideration and furthermore, negotiations with customer are also registered

#### Configuration – the possible ways of Return Packages Register

- ✘ Customer – the functionality may be connected with customers and consequently, all sales orders will be connected with Return Packages Register
- ✘ Sales order – functionality may be connected with a single sales order
- ✘ Transaction journal – functionality may be connected with transaction journal, all transaction journals will have Return Packages Register
- ✘ Return package note – the application works independently from other registers
