

IT PiAST AX Warehouse Mobile Assistant

IT PiAST AX Warehouse Mobile Assistant is a powerful tool for managing the shipping and receiving goods. It uses data from open purchase or sales orders and bar codes, to automate the shipping & receiving processes. It can work on-line exchanging data directly with Axapta over wireless. It can also work off-line, synchronizing information in batches, after connecting to docking station.

Key benefits

- ✘ Handling of the shipping and receiving with a portable data collector,
- ✘ Inserting item name, quantity etc. from EAN13 and EAN128 bar codes,
- ✘ On- or off-line work,
- ✘ Maintaining precise data for quantities of shipped & received goods,
- ✘ Automatic search for open orders,
- ✘ Enhanced support for Track & Trace control due to registering the manufacturer batch no.,
- ✘ Immediate warehouse transaction posting and printing of documents (e.g. packing slip).

Data collectors with bar code scanners

Inserting the data from an external collector

Warehouse Mobile Assistant enables the operators to use handheld data collectors with bar code scanners to automate shipping and receiving in Axapta. The collectors can be carried by the warehouse attendants or mounted on vehicles (e.g. forklifts). The information about transports is taken from Axapta open sales and purchases orders. After processing the shipping & receiving the collector synchronizes data and orders are updated accordingly.

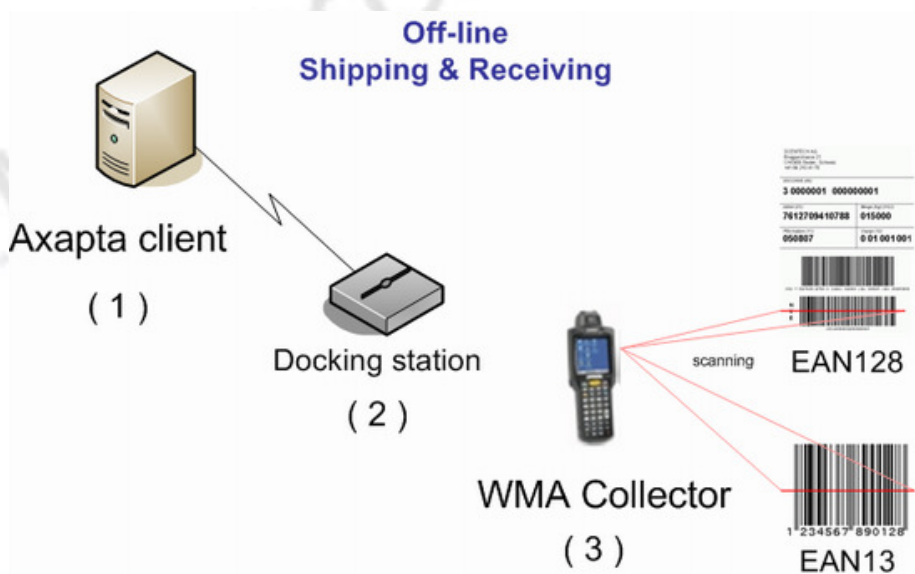

Bar Codes speed up the processes

EAN13 codes contain the information concerning the item name, whereas EAN128 codes include also batch no., quantities, expiry dates, etc. These data are transferred automatically after scanning by the collector. They are electronically registered in appropriate records in Axapta database. If there are some inaccuracies, the data can be corrected instantly or during synchronization, by the Warehouse Mobile Assistant operator.

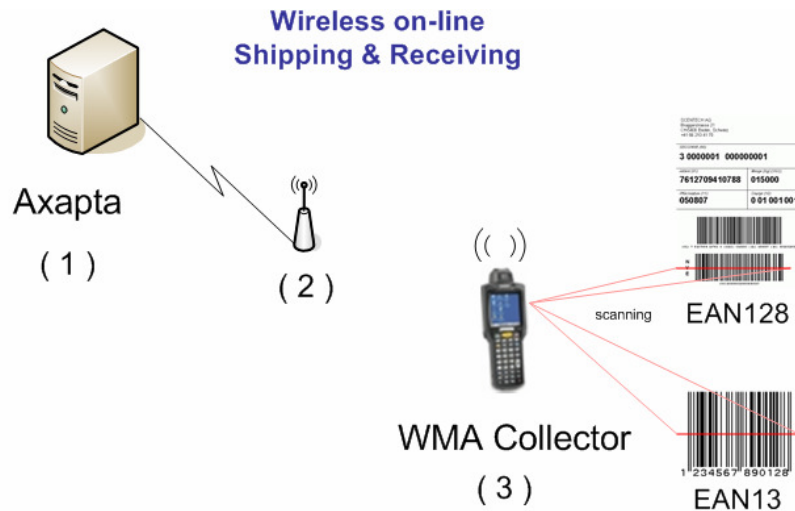

IT PiAST AX WMA Customization

Warehouse Mobile Assistant may be configured to process data for only one warehouse at a time. What is more, parts of one order in Axapta, can be shipped or received by Warehouse Mobile Assistant in many warehouses simultaneously. For instance, a sales order for an item of 100 pieces for a customer may be processed in warehouse A for 80 pieces and warehouse B for 20 pieces. Therefore, Warehouse Mobile Assistant can be used regardless of location without losing the data.

How does IT PiAST AX WMA work off-line?

1. Warehouse Mobile Assistant (3) scans EAN bar code and reads item data. WMA collector operator downloads open sales or purchase orders for wanted items.
2. The operator chooses an appropriate purchase/sales order and optionally changes the quantities manually or by scanning bar codes.
3. The collector is attached to the docking station (2) and synchronizes data with Axapta. All the processed transactions are registered.

How does IT PiAST AX WMA work on-line?

1. Warehouse Mobile Assistant (3) scans EAN bar code and reads item data. WMA collector searches in Axapta (1) for open sales or purchase orders for the scanned item. All the operations take place on-line through wireless connection (2).
2. The operator chooses an appropriate purchase/sales order and optionally changes the quantities manually or by scanning bar codes.
3. After confirming, a transaction is registered in Axapta in Real-time.

IT PiAST – who we are and how we work:

We are...

- ✘ A team with 4 year experience in Axapta
- ✘ Proficient – we have 21 CCMBBS certificates and 3 CMMBS certificates
- ✘ Professional – we implement, develop, and provide all Axapta technical backup in medium size companies
- ✘ Innovative – we are the first in Poland who implemented specific Axapta modules
- ✘ Business Partners – Microsoft Business Solutions Certified Partner

We work...

- ✘ Flexibly – we specialize in developing and enhancing Axapta
- ✘ Innovatively – we integrate Axapta with external devices
- ✘ Creatively – we expand and enhance Axapta's features
- ✘ As a team – as a specialists in various areas we build complete solutions
- ✘ For our customer success – due to our CRM standards

IT PiAST – it's all about excellence
