

IT PiAST AX WMS Client automates handling of goods in warehouses. It helps to register the flow of wares during shipments, picking, pallet transports and update item arrival or production input journals. While keeping continuous wireless connection with Axapta, WMSClient maintains accurate data in real time.

Key benefits

- ✘ Automation of goods' managing processes in warehouses,
- ✘ Inserting the data from pallet and location bar codes,
- ✘ Elimination human-based errors,
- ✘ Enhanced support for Track & Trace control due to registering the manufacturer batch no.,
- ✘ Wireless connection – Real Time transaction updates.

Integration with other modules

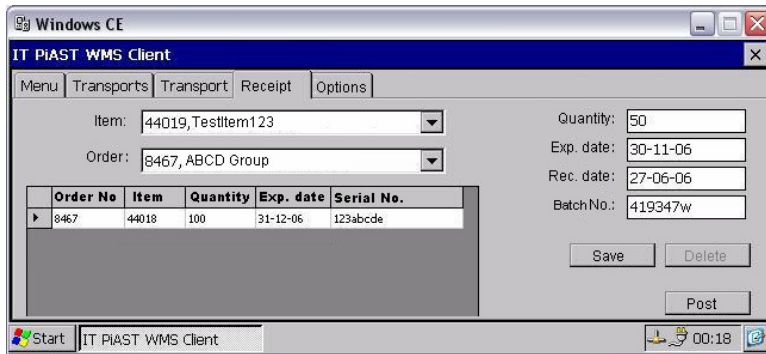

The data from WMSClient influences directly Axapta Inventory module and is integrated with (WMS) Warehouse Management System (I and II) module. It can work synchronously, updating the related records in Real-Time.

Manage the Warehouse

WMSClient scans and recognizes each pallet in every location in your Warehouses. It eliminates human mistakes, by allowing to transport only the ordered goods.

Automate shipments & pallet transports

The data from bar codes are transferred automatically after scanning to appropriate records in Axapta database. If there are some inaccuracies, the data can be corrected on the spot by the WMSClient operator.

User-Friendly Interface

WMSClient provides easy to use interface, which can be adapted to warehouse operator work. The WMSClient device can be mounted on forklifts, as well as used manually inside or outside the warehouse. It shows only the data based on Axapta orders for the scanned item.

How WMSClient works?

1. Scan the bar code from the label on package/pallet/location
2. Start and finish the transport of a pallet between locations by scanning bar codes
3. Optionally correct/fill the necessary data
4. Register the transaction in Axapta.

IT PiAST – who we are and how we work:

We are...

- ✗ A team with 4 year experience in Axapta
- ✗ Proficient – we have 21 CCMBBS certificates and 3 CMMBS certificates
